Authorized to work in Canada | Toronto, ON (Hybrid)

SUMMARY

Highly analytical data analyst with experience in data analysis, SQL, and Python, seeking to join the BI team at Acme Corp.

EXPERIENCE

Global Risk Intelligence and Technology Co-op

January 2026 – April 2026

Manulife

Toronto, ON

- Recommended a prioritization framework for automation use cases, ranking initiatives by effort-to-impact ratio and designing a reusable AI agent capability architecture that cut solution complexity by 75% across 20 capabilities.
- Automated Excel-based workflows using Python (Pandas, OpenPyXL) across 56 files, saving 170-220 hours per week and eliminating repetitive manual effort.

Data Analytics Intern

July 2025 – January 2026

Northeastern University (ADISC)

Toronto, ON

- Contributed to a Northeastern research team partnered with the City of Toronto's Transportation Services to analyze mobility patterns for major recurring events.
- Analyzed public-transit vs. highway usage by originating region across three years, directly informing where the city could target public-transit awareness campaigns.

PROJECTS

Bank Transaction Fraud Detection - End-to-End ML Pipeline

- Developed an end-to-end fraud classification pipeline with XGBoost and a 3-tier flagging system, capturing 28.5% of fraud at an 11% flag rate.
- Improved model performance by experimenting with hyperparameter tuning and optimizing feature engineering techniques.

Toronto Island Ferry Sales Forecasting

- Implemented an automated forecasting pipeline with Prophet and Airflow, deploying a containerized app on AWS ECS/ECR.
- Enhanced model accuracy by fine-tuning parameters for optimal performance.

SKILLS

Python, SQL, Git, Apache Airflow, Docker, AWS (S3, ECS, ECR), Machine Learning, Classification, Anomaly Detection, Feature Engineering, Statistical Modeling, Predictive Modeling, Power BI, Streamlit

EDUCATION

Northeastern University

January 2025 – January 2027

Master's in Data Analytics
